EXERCÍCIO

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int a = sc.nextInt();
        int b = sc.nextInt();
        int c = sc.nextInt();

        if ((a < b && b < c) || (c < b && b < a)) {
            System.out.println(b);
        } else if ((b < a && a < c) || (c < a && a < b)) {
            System.out.println(a);
        } else {
            System.out.println(c);
        }
    }
}
```

EXERCÍCIO 2

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int v = 0;

        for (int i = 0; i < 6; i++) {
            char x = sc.next().charAt(0);

            if (x == 'V') {
                v++;
            }
        }

        if (v == 5 || v == 6) {
            System.out.println(1);
```

```
        } else if (v == 3 || v == 4) {
            System.out.println(2);
        } else if (v == 1 || v == 2) {
            System.out.println(3);
        } else {
            System.out.println(-1);
        }
    }
}
```

EXERCÍCIO 3

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int s = sc.nextInt();
        int a = sc.nextInt();
        int b = sc.nextInt();

        int cont = 0;

        for (int i = a; i <= b; i++) {
            int n = i;
            int soma = 0;

            while (n > 0) {
                soma += n % 10;
                n = n / 10;
            }

            if (soma == s) {
                cont++;
            }
        }

        System.out.println(cont);
    }
}
```

EXERCÍCIO 4

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int n = sc.nextInt();

        int resultado = (n + 1) * (n + 2) / 2;

        System.out.println(resultado);
    }
}
```

EXECÍCIO 5

```
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int n1 = sc.nextInt();
        int d1 = sc.nextInt();
        int v1 = sc.nextInt();

        int n2 = sc.nextInt();
        int d2 = sc.nextInt();
        int v2 = sc.nextInt();

        if (d1 * v2 < d2 * v1) {
            System.out.println(n1);
        } else {
            System.out.println(n2);
        }
    }
}
```
